

Maintenance drugs are medications prescribed for chronic, long-term conditions and are taken on a regular, recurring basis. Examples of chronic conditions that may require maintenance drugs are: high blood pressure, high cholesterol, and diabetes.

HAP has developed a list of drugs classified as "maintenance drugs" based on the most prevalent chronic health conditions in our member population. Drugs placed on the Maintenance Drug List are well-established medications that have proven safety and efficacy and are considered first-line therapy options for the treatment of common chronic conditions.

The list refers to the most common dosage forms and strengths of a product. Less common forms or strengths of a listed product may not be covered under the maintenance drug list. The majority of these drugs are now available as generic drugs.

How are Drugs Approved to be on the Maintenance Drug List?

Many of the medications that you may be taking on a regular basis will not be classified as a maintenance drug on our Maintenance Drug List. HAP uses a committee of physicians, nurses, and pharmacists to determine which drugs are to be placed on our Maintenance Drug List. All requests for adding drugs to this list are thoroughly reviewed by the committee and a determination is made to add a drug to the Maintenance Drug List.

How are Maintenance Drugs Dispensed?

Up to a 90-day supply is covered for drugs listed on the HAP Maintenance Drug List if filled at an eligible 90-Day HAP retail pharmacy or by using the Pharmacy Advantage Home Delivery Service. Most major chains and many independent pharmacies are in the HAP 90-Day network. Typically the charge for a 90-day supply is two retail copays but individual plans may vary.

Drugs that are not listed on the maintenance drug list will be limited to 30-day supply at retail pharmacies.

In order to fill a 90-day prescription, the physician must write the prescription for a 90-day supply.

ANTIDOTE THERAPEUTICS			ANTI-HISTAMINE DRUGS
