Vygart	Efgartigimod-fcab	One of the following: azathioprine, mycophenolate, cyclosporine, or tacrolimus	Azathioprine, mycophenolate, cyclosporine, or tacrolimus
--------	-------------------	---	---

Step Therapy requirements apply to certain Part B drugs. Step Therapy is a utilization tool that requires you to first try other drugs to treat your medical condition before we will cover the drug your physician may have initially prescribed. Currently, the plan has Step Therapy in place for the drugs listed above. The preferred drugs must be tried before the non-preferred product can be authorized or your doctor can tell us the reason the preferred drug is not right for you. The list will be updated as additional drugs are added to the Part B drug Step Therapy program.
