

URGENT UPDATE: THE CHANGING FACE OF SYPHILIS IN MICHIGAN

In 2012, 1 in 5 infectious syphilis cases in Michigan was acquired through heterosexual sex; today it is 1 in 2. There has been a fivefold increase in cases among females just since 2017. With rapid transmission occurring among heterosexuals, our messages, messengers, and medical practices all need to be reevaluated and updated.

Please join us to learn more about this trend and what can be done to stem the tide. Continuing Medical and Nursing Education Credits will be offered.

REGISTRATION IS REQUIRED.

Please register for one of the below dates. The same webinar will be offered on two dates

March 16th 2022 8:00AM-9:00AM

To register:
